Introduction

Welcome to the **Work Experience Module (WM 01)** of the *Occupational Certificate: Software Engineer (NQF Level 6)* forms the bridge between what you've learned in the classroom and what you'll encounter in the software development industry. It gives you the opportunity to apply your knowledge in real workplaces, develop professional working habits, and produce evidence of your competence.

This module is not a simulation, it's a structured period of workplace exposure where you will perform authentic tasks under the guidance of a qualified workplace mentor. The learning here is **practical, real, and essential** to your success in both the **External Integrated Summative Assessment (EISA)** and your future career as a software engineer.

Purpose

The purpose of the Work Experience Module is to provide you with structured opportunities to gain exposure to software design functions, and to apply your classroom learning in meaningful, measurable ways. Specifically, this module ensures that you:

- Gain experience determining software requirements in real world contexts.
- Contribute meaningfully to team based software design activities.
- Develop the ability to model, document, and communicate software requirements.
- Align your work with professional standards and organisational procedures.

Work Experience and the EISA

You may be wondering how your time spent in the workplace, doing tasks, attending team meetings, writing requirement documents, and contributing to designs, connects to the EISA, your final national exam. Let's break it down:

What is the EISA? The External Integrated Summative Assessment (EISA) is the final assessment required to complete your qualification. It is a formal exam that checks whether you can apply everything you've learned: knowledge, practical (skills), and work experience in a coherent, integrated way.

This means you are not only tested on what you *know*, but also on what you can *do*, and what you have *experienced* in a real work environment.

Workplace learning forms the practical backbone of your preparation for the EISA. Here's how:

1. It builds real world context.

- The EISA will present you with software problems, scenarios, or case studies that resemble what you would have encountered in your workplace experience.
- If you've engaged actively in Work Module 01 tasks like; defining problems, modelling requirements, or contributing to design discussions, you'll be equipped to answer confidently and competently.

2. It produces your required evidence.

- To register for the EISA, you must submit:

1. Statement of Results – this is a collection of all your:

- Learner Workbook Activities – deemed competent
- Multiple Choice Assessments – deemed competent
- Summative Assessments – deemed competent

2. Statement of Work – this is a collection of all your:

1. Workplace Activities and Tasks – completed and deemed competent in
2. All evidence collated, filed and submitted by your mentor
3. All evidence assessed and/or moderated
4. Workplace evidence documents, and
5. Reflective Report based on your WM 01 experience. This format will help you get that right!

- These aren't just paperwork, they prove to the QCTO that you've applied your skills in a live environment.
- The workplace experience will best prepare you for the EISA.

3. It sharpens your integration skills.

- The EISA focuses on how well you can bring everything together: your knowledge (e.g. software engineering principles), your practical ability (e.g. coding, modelling), and your workplace insights (e.g. following company protocols or working in teams). If somehow you got into this qualification with a “no coding” background, it is not too late to brush up on your skills.
- WM 01 is the only part of your training that exposes you to the full ecosystem of software development **people**, **processes**, **tools**, and **pressure**.

4. It mirrors the EISA format.

- Many EISA questions are based on workplace aligned tasks. Refer to all the tasks within Work Activities and Work Activities within the Work Module One.
- If you’ve already written requirement specs or participated in software design meetings, you’ve practiced the same type of thinking and documentation expected in the exam.

Bottom Line: Your Workplace Learning *Is* Your Exam Preparation

Your workplace experience is not separate from the EISA, it is the foundation of your success in it. Every requirement you define, every document you create, and every team interaction you participate in, prepares you to:

- Answer scenario based questions with confidence
- Provide structured evidence of your competence
- Understand and solve real world software challenges

So approach your work experience with the same focus and energy you would give to a final exam, because, in a very real sense, it is.

QUALIFICATION RULES

This qualification is made up of the following compulsory Knowledge and Practical Skill Modules:

Knowledge Modules:

- 251201 001 00 00 KM 01, Software Engineering, NQF Level 6, Credits 20
- 251201 001 00 00 KM 02, Programming, NQF Level 6, Credits 20
- 251201 001 00 00 KM 03, Database design and Information Systems, NQF Level 6, Credits 15
- 251201 001 00 00 KM 04, Fundamentals of Project Management in relation to Software Engineering, NQF Level 5, Credits 5
- 251201 001 00 00 KM 05, Digital and Business Mathematics, NQF Level 5, Credits 15

Total number of credits for Knowledge Modules: 75

Practical Skill Modules:

- 251201 001 00 00 PM 01, Document system design, NQF Level 6, Credits 25
- 251201 001 00 00 PM 02, Design and Manipulate Databases, NQF Level 5, Credits 5
- 251201 001 00 00 PM 03, Program and deploy applications, NQF Level 6, Credits 25
- 251201 001 00 00 PM 04, Test or debug source code to ensure client's needs are met, NQF Level 5, Credits 15

Total number of credits for Practical Skill Modules: 70

Work Experience Modules:

- 251201 001 00 00 WM 01, Software design, NQF Level 6, Credits 30
- 251201 001 00 00 WM 02, Database design and manipulation, NQF Level 5, Credits 20
- 251201 001 00 00 WM 03, Software development, NQF Level 6, Credits 30
- 251201 001 00 00 WM 04, Software testing, NQF Level 5, Credits 15

Total number of credits for Work Experience Modules: 95

Exit Level Outcome:

1. Design software to meet clients' needs
2. Design and manipulate databases
3. Develop software to add value to the organisation
4. Test or debug source code

Responsibilities of Your Workplace Mentor

Your Workplace Mentor will be required to:

- **Collaborate** with key people within the organisation.
- **Schedule** work experience opportunities.
- **Oversee learner activities** based on the WM 01 requirements.
- **Track your participation** in real-world tasks aligned with WA codes.
- **Verify workplace evidence** produced by you against listed requirements.
- **Verify workplace evidence** and ensure accurate filing protocols.
- **Sign off** your completed activities.
- **Provide feedback** on the completeness, validity and authenticity of workplace evidence.
- **Collate and submit** a completed Statement of Work (SOW) along with all the evidence, to Mindworx.
- **Engage with you**, offering constructive feedback where gaps are noted.
- **Support you** by encouraging you even when it is a challenge adapting to the real world of work.
- **Refer** all challenges regarding evidence queries, workplace activity queries and content to: preciousk@mindworx.co.za

What is NOT expected of your Workplace Mentor

Your Mentor is not expected to:

- **Refer** you to the learning content that can help you with the completion of Workplace Tasks, please refer to your learning content.
- **Upskill** or reteach the learning content required to complete any Workplace Activity or supporting Workplace Task.

Note: comments in red are intended for the Assessor of this module!

Mindset and Emotional Readiness — Stepping Into Real World Workspaces

This part of your learning is one of the most exciting and transformative chapters of your software engineering journey **Work Experience Module WM 01**.

This is where the theory you've learned comes to life. But entering a real world workplace, especially within **busy corporates or companies**, can feel overwhelming at first. Even if you are employed at the organisation, stepping into the workspace of a busy software engineer is daunting! These environments are fast paced, often stretched, and deeply focused on delivery. You may not get a grand introduction or someone assigned just to hold your hand and that's okay.

Here's how to thrive emotionally and mentally in this new space:

- **Adopt a learner's mindset:** You are not expected to know everything. You *are* expected to observe, ask questions, take initiative, and grow.
- **Communicate with respect and clarity:** Busy professionals appreciate concise questions, willingness to help, and initiative. Don't be afraid to speak up, but do so thoughtfully.
- **Stay grounded:** There may be moments of uncertainty. Take notes, breathe, and reflect. The discomfort is part of your transformation.
- **Earn trust through reliability:** Show up consistently. Meet deadlines. Be dependable. This earns you opportunities.
- **Be adaptable:** Workplaces shift priorities quickly. Your ability to flex and still deliver will set you apart.
- **Be kind to yourself:** Growth is messy. You're not just building code, you're building character, grit, and confidence.

Remember: You are not “just a student.” You are an emerging professional. This experience is not about perfection, it's about progression. You may already be employed in the profession or division and even then, this is your chance to gain the experience needed to stay future fit and relevant.

Drawing from Your Previous Learning: Bring It All Together

As you enter the workplace, it's essential to realise that you're not starting from scratch, you're stepping forward with a strong foundation built through your **Knowledge Modules (KMs)** and **Practical Skills Modules (PMs)**. Now is the time to **apply**, **reinforce**, and **refine** what you've already covered.

Use What You Know - You've already explored key topics that will help you thrive in your work placement. Let's make those connections clear:

WM 01 WE01: Determining Requirements

Relevant Knowledge Modules:

- **KM 01:** Introduction to Software Engineering
- **KM 03:** Requirements Analysis and Specification
- **KM 04:** Software Modelling and Design

Relevant Practical Modules:

- **PM 01:** Gathering and documenting user requirements
- **PM 03:** Creating structured requirement specifications
- **PM 04:** Analysing business problems and proposing solutions

How to Connect:

When you're asked to define a problem or write a requirement specification in the workplace, revisit your module notes on requirement types, stakeholder analysis, and modelling techniques like use case diagrams or UML. These will help you approach the task with clarity and confidence.

WM 01 WE02: Participating in Software Design

Relevant Knowledge Modules:

- **KM 02:** Software Development Life Cycle (SDLC)
- **KM 05:** Software Design Principles and Patterns
- **KM 06:** Teamwork and Software Project Collaboration

Relevant Practical Modules:

- **PM 05:** Designing software solutions using standard methodologies
- **PM 06:** Working in collaborative coding and design teams

How to Connect:

As you step into team based design sessions, lean on your knowledge of design patterns,

architecture layers, and modelling tools. Your experience with collaborative version control, Agile roles, and design documentation will help you contribute meaningfully—even as a junior team member.

Tips for Leveraging Past Learning in the Workplace

- **Keep your notes close:** Save digital or printed summaries of each module for easy reference during your work placement.
- **Refer back before starting a task:** Look up key terms, diagrams, or sample templates from your past modules. Use the free links and resources provided to you in this guide.
- **Identify gaps in your understanding:** If you encounter something new at work, compare it to what you learned, this will strengthen your problem solving and adaptability.
- **Update your own ‘learning reflections journal’:** Note down how you applied something you learned, or how it was different in practice. These reflections will enrich your final EISA submission.

Useful Resources to Supplement Software Engineering Learning

Below is a curated list of free, AI supported, or visually rich platforms that can enhance your learning experience as a software engineer. These tools are excellent for exploring code patterns, software architecture, UI/UX design, development workflows, and industry practices.

1. You.com (AI-Powered Search Engine for Developers)

- Website: <https://you.com>
- You.com provides AI-powered answers from coding forums, GitHub, Stack Overflow, and documentation pages. Use the "YouCode" mode for a developer-centric experience with autocomplete and code snippets.

2. Phind (AI Search Engine for Software Engineers)

- Website: <https://www.phind.com>
- Designed specifically for developers, Phind delivers fast, AI-generated technical answers with inline code and detailed explanations. Ideal for problem-solving, debugging, or exploring unfamiliar technologies.

3. Pinterest

- Website: <https://www.pinterest.com>
- While not traditionally academic, Pinterest remains valuable for visual learners. Use it to explore:
- Software architecture diagrams
- UML design templates
- API workflows
- UI/UX design inspiration
- Search terms like "software engineering diagrams," "use case models," or "system architecture flows" yield rich visual results.

4. GitHub Copilot (Free with GitHub Student Pack)

- Website: <https://education.github.com/pack>
- GitHub Copilot offers AI-driven code suggestions directly inside your editor (Visual Studio Code or JetBrains). It's available for free to students who register through GitHub Education.

5. YouTube – Recommended Channels for Visual and Practical Learning

- Visit: <https://www.youtube.com>
- Suggested channels:
- Code with Ania Kubów
- Fireship
- The Net Ninja
- Low Level Learning
- These channels provide tutorials, code walk-throughs, and explainers on software engineering concepts, full stack development, and system design.

6. Excalidraw (Free Diagramming Tool)

- Website: <https://excalidraw.com>
- A collaborative whiteboard for sketching diagrams. Great for:
- Requirements modelling
- UI flows
- Software architecture diagrams
- Brainstorming system designs

7. Notion (Free Personal Use with AI Features)

- Website: <https://www.notion.so>
- Use Notion to organize notes, track project work, or build a personal learning dashboard. AI features help summarize notes, rewrite concepts, and structure your planning.

8. Roadmap.sh (Interactive Learning Paths)

- Website: <https://roadmap.sh>
- This site offers structured roadmaps for various software engineering roles such as frontend developer, backend developer, DevOps engineer, and system designer. It helps clarify learning order and critical skills.

9. Diagrams.net (formerly Draw.io)

- Website: <https://app.diagrams.net>
- A free diagramming tool to create:
- Flowcharts
- Entity Relationship Diagrams (ERDs)
- UML diagrams
- Class and sequence diagrams
- Highly useful for documenting work in your WM-01 learning activities.

10. Online Code Platforms (Live Collaborative Coding)

- StackBlitz: <https://stackblitz.com>
- CodeSandbox: <https://codesandbox.io>
- Replit: <https://replit.com>

Introduction to Completing Workplace Activities and Tasks

Workplace Activities (WAs) are structured learning tasks designed to help you apply theoretical knowledge in real-world or simulated work environments. Each activity is aligned with specific outcomes you're expected to demonstrate during your workplace learning. This approach ensures practical competency, reinforces your skills, and provides tangible evidence for your professional portfolio.

These activities are not just "assignments"—they are essential opportunities for **active learning**, skill application, and professional development. Completing them properly ensures you're meeting the standards of your qualification and gaining relevant, industry-based experience.

How to Complete Workplace Activities Using the Table as a Guide

Below is an explanation of key terms and concepts seen in the activity tracking table and how to use it to effectively complete your workplace tasks:

Header	How to Use It
WA Code	Start by identifying the correct Workplace Activity code (e.g., WA0101). This code should be written on all associated documents, submissions, and communications. It acts as a reference number.
Workplace Activity	Read this description carefully. It tells you the specific task or competency being targeted. Make sure you understand what is expected before proceeding. All Workplace Activities should be labelled upon submission.
Work Tasks	Follow these step-by-step instructions to complete the activity. These steps are your practical guide, be thorough and systematic. Each task should ideally be completed in sequence unless stated otherwise. Once again use the Task Code to guide your labelling in submission.
Evidence Type	As you complete the task, produce the specified types of documentation (e.g., reports, flowcharts, meeting notes). These documents prove you completed the task. Always ensure they are clear, complete, and well-formatted. Our evidence ideas are only suggestions. Please feel free to expand on yours
Document File Name	Use the following standardised naming convention when saving your documents: Student ID_SE_WE01_WA0101.03_File Name This ensures your portfolio is organised and easy to review.
Included in SOW	Check whether the activity is part of your Mentor's Statement of Work. This ensures the activity is officially acknowledged. Keep a copy for yourself and ensure your mentor signs and retains one too.
Time Taken per Task	Use the estimated time as a guide for planning and tracking your progress. Record your actual time for reflection and feedback later. If a task takes significantly longer, note why.

Header	How to Use It
Work Challenges	Comment on the workplace challenges (e.g., lack of access to data or unclear instructions). This helps you explore alternatives, to possibly discuss mitigation strategies with your mentor or supervisor and request Mindworx support.
SDP Simulation Required	If you are unable to complete a task due to real-world limitations, your Skills Development Provider (SDP) may simulate the activity. Check if a simulation is required and follow the simulation procedures. This will need to be advised to your mentor to resolve with Mindworx.
Attempts	Some tasks must be repeated to demonstrate consistency (e.g., “attempt at least twice”). Track how many times you perform the task and gather evidence for each attempt.
Mentor Comments	After completing the activity, your mentor should review your work and provide feedback in this section. This feedback is important for reflection and future improvement, take it seriously.
Learner Reflections	You – the learner will need to reflect and comment (in a structured manner) on the experiential learning that took place. We have provided prompts to guide your reflection and a rubric to show you what the assessor of this module will be looking out for.

Tips for Success

- **Stay organised** – Name files correctly and keep your documents together.
- **Be proactive** – If you encounter issues, communicate early with your mentor or provider.
- **Be honest** – If you simulate a task, record it as such.
- **Reflect** – After each activity, review what you learned and how you could improve.
- **Engage with your mentor** – Their feedback is a vital part of the learning process.

WM-01-WE01: Determine requirements for different software

Timeframe: At least twice, within six to nine months (in other words, you will need to show that you have completed the work experience at least twice and submit evidence that you have done it two times)

Scope of Work Experience:

You will engage in the following Work Activities:

- WA0101 Define the problem
- WA0102 Read and interpret the scope of work
- WA0103 Investigate / analyse the problem
- WA0104 Model software requirements
- WA0105 Document requirements

Supporting Evidence Required:

- SE0101 Requirements Specification Document

The supporting evidence shown above is not the only supporting evidence required as proof of work HOWEVER, you will need to provide the above SE0101 in addition to the supporting evidence suggested in the table below:

Workplace Experience Activity Log

WA Code	Workplace Activity Description	Work Tasks	Suggested Evidence Types	Evidence Document Name	Time per Task (hrs)	Attempts per Task
WA0101	Define the problem	WA0101.01 Engage with stakeholders to understand the problem WA0101.02 Capture the current state of the system or process WA0101.03 Identify business goals and constraints WA0101.04 Formulate a clear and concise problem statement	Meeting minutes Stakeholder interview notes Current state diagrams Business goals summary Problem definition report	NtanganedzeniBrightonMufamadi_SE_WE01_WA0101_probelm	4	5

Mentor's Feedback

Well problem statement and business goals

Mentor Signature

Assessor Comments:

WM 01 WE02: Participate as a team member in creating a software design

Timeframe: At least twice, within six to nine months (in other words, you will need to show that you have completed the work experience at least twice and submit evidence that you have done it two times)

Scope of work:

The following three outcomes have been expanded upon in the next section to help you gather the minimum work experience needed. There is a separate table for each WA (work activity)

- WA0201 Read, interpret and confirm the software requirements
- WA0202 Gain exposure to organisation's software modelling techniques
- WA0203 Participate in the software designing process

Supporting Evidence

- SE0201 Software design specification document (This is your supporting Evidence)

The supporting evidence shown above is not the only supporting evidence required as proof of work HOWEVER, you will need to provide the above SE0201 in addition to the supporting evidence suggested in the table below:

Workplace Experience Activity Log

WA Code	Workplace Activity Description	Work Tasks	Suggested Evidence Types	Evidence Document Name	Time per Task (hrs)	Attempts per Task
WA0201	Read, interpret and confirm the software requirements	WA0201.01 Obtain and Read the SRS Document WA0201.02 Highlight Key Functional and Non Functional Requirements WA0201.03 Identify Ambiguities or Gaps WA0201.04 Draft Clarifying Questions WA0201.05 Participate in a Requirements Walkthrough or Review Session WA0201.06 Create a Mind Map or Visual Summary WA0201.07 Summarise the Requirements in Your Own Words WA0201.08 Cross Reference with the Project Scope Document WA0201.09 Log Issues or Clarifications in a Project Management Tool WA0201.10 Discuss and Confirm Your Understanding with a Mentor or Peer WA0201.11 Take Notes and Document Clarifications from Stakeholders WA0201.12 Monitor Changes to the Requirements Over Time WA0201.13 Contribute to a Requirements Traceability Matrix (RTM) WA0201.14 Translate Requirements into Simple Pseudo Code or Flow Diagrams WA0201.15 Prepare and Deliver a Short Requirements Summary Presentation	SRS Summary Document Annotated SRS Mind Maps or Visual Diagrams Clarification Logs Meeting Notes or Attendance Proof Version Control Logs RTM Contribution Screenshots Presentation Files or Feedback Forms	Ntanganedzeni BrightonMufamadi_SE_WE02_WA0201_ReadInterpretConfirmSoftwareRequirement	10	4

Mentor's Feedback Well defined requirements and traceability matrix. Some pseudo code or flow diagram would have been nice to see as well

Evidence submission challenges	Work Experience Challenges

Learner Reflection Journal:

What problem were you asked to solve?

How did you determine and model the requirements?

What tools, techniques, or documents did you use?

What challenges did you face, and how did you resolve them?

How did this connect to your training modules?

Overall comments:

Self-Assessment Rubric (tick where applicable):

Criterion	Below Expectations (1)	Meets Expectations (2)	Exceeds Expectations (3)
Understanding Requirements	☐	☐	☐
Use of Modelling Techniques	☐	☐	☐
Team Collaboration	☐	☐	☐
Contribution to Design Artefacts	☐	☐	☐
Reflection and Growth	☐	☐	☐

<u>06</u> / <u>11</u> / <u>26</u>	<i>Mentor / Manager and Learner Acknowledgement:</i> This is to confirm that the learner has completed the above workplace activities competently in the workplace environment.		

Overall Feedback and notes:

The learner completed majority of the work place activities satisfactorily with some noted places for improvement. Just a small note that the software testing and deployment sections were missing from the submission hence those were skipped from the review
